

## Stencil Kids' Artwork on T-Shirts Using Fabric Inks

- 1 Children love making their very own screen-printed shirts to wear or give. The Speedball Standard Fabric Screen Printing Kit makes it surprisingly easy—and while you have the supplies out, how about making some greeting or thank-you cards at the same time? Choose a simple drawing off the fridge or have the kids make something especially for the project. (We reused a snowflake design from previous projects.)
- 2 Take a 12" x 16" sheet of DANIEL SMITH Paper Palette and cut it to 10" x 14" to fit the screen. Trace your design on the shiny side of the Paper Palette sheet, then cut out the design with an X-Acto knife. (Kids can trace, adults should cut.) Using masking tape, tape the stencil to the underside of the screen frame. To print, follow the instructions in the booklet that comes with the kit—the stencil masks the screen so you'll just print the cutout area.
- 3 Make a test print on scrap paper, then start printing your cotton T-shirts. Clean the screen promptly after you finish printing. Once the ink is dry on the fabric, iron it at high heat (no steam) with a cloth between the iron and the print; this helps the print withstand repeated washings.

The **Speedball Standard Fabric Kit** contains excellent step-by-step Instructions for many silk-screen projects—from beginner to advanced.

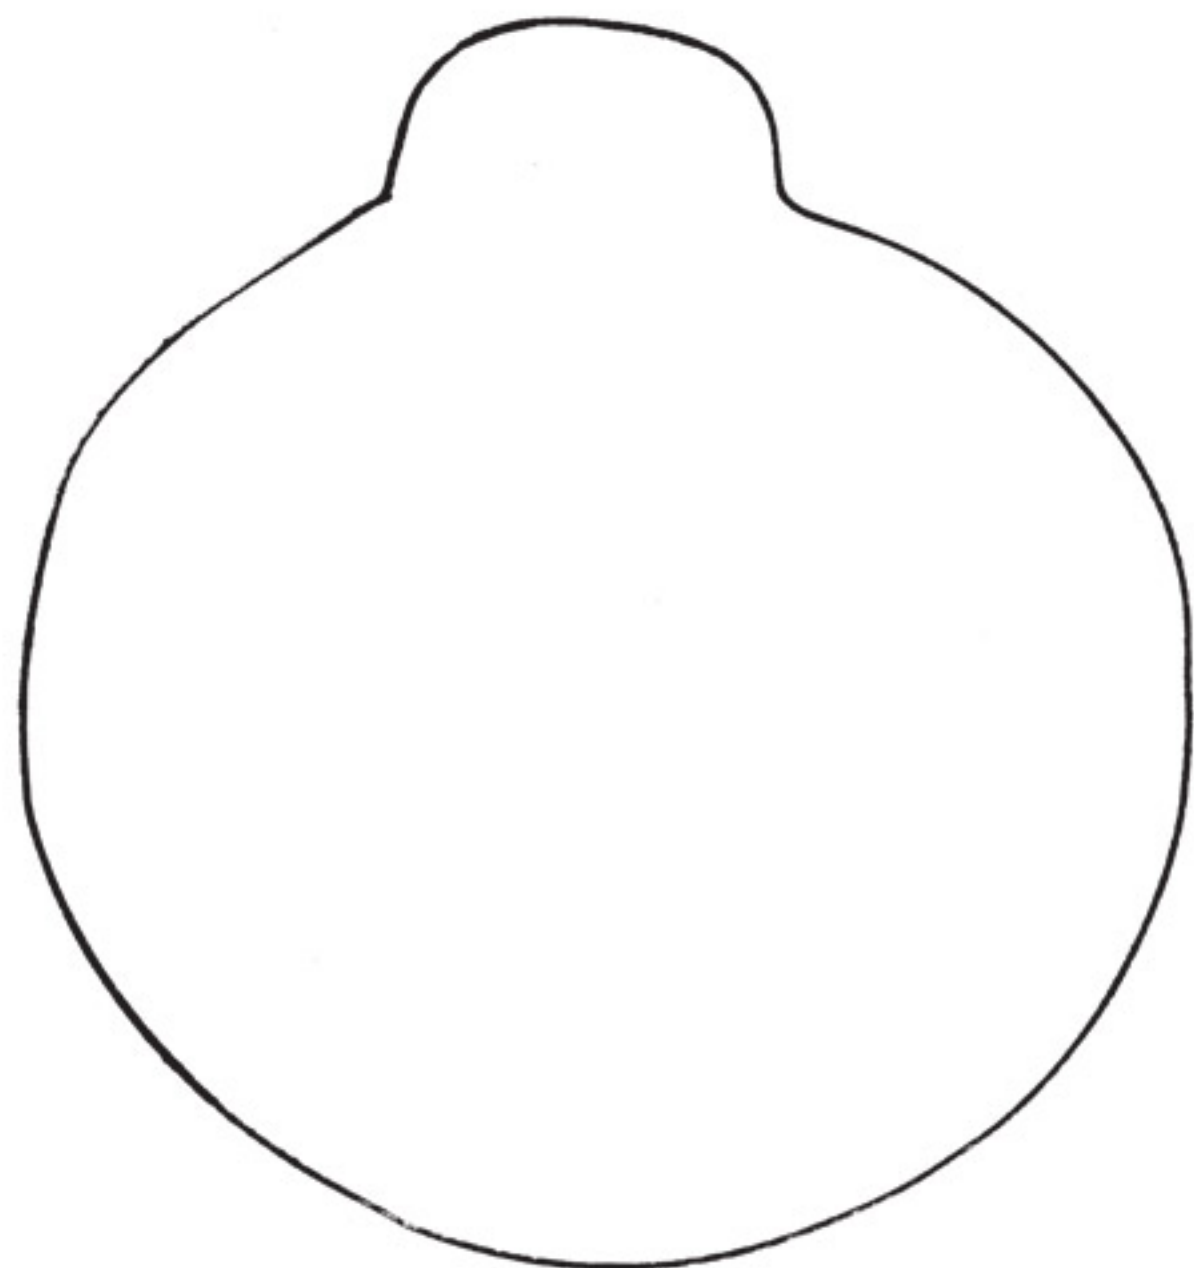

### here's what you'll need

<b>Speedball Standard Fabric Kit</b> 530 040 014	<b>SALE \$49.95</b>
<b>DS Paper Palette Pad-12" x 16"</b> 436 075 002	\$6.89
